

Peridox®

Peridox® is a biocide used in veterinary practice for hygiene purposes. It reduces parasites in ponds and also increases dissolved oxygen levels. Söll **Peridox®** is a powder, and was developed to reduce the proliferation and spread of parasites and algae in aquaculture ponds. It acts against parasites like ichthyo ("white spot") – the intermediate stages in the water and sediment.

Peridox® is a legally-permitted biocide that is effective, yet the active ingredient breaks down without residue.

Labelling according to EU Directive 98/8/EC:

Use biocides safely. Before using always read the label and product information.

Recommended dose for parasite infestation: 45–60 g/m³

Packaging sizes:
10 / 50 / 25 / 500 / 1000 kg

Peridox®

AquaStab®

Adjusts and stabilises the pH level to the optimum range. It is much more effective than conventional lime. The growth of plants and algae change the water chemistry of the pond. Söll **Aqua-Stab®** creates ideal living conditions for all fish very quickly. It also improves water quality, giving a stable ecological equilibrium in growing ponds. It is especially useful if the pond contains harmful substances such as ammonia and nitrite.

Aqua-Stab® acts as a buffer (reducing pH fluctuation), keeping the water within a stable pH range of 7.5 to 8.5 by increasing the carbonate hardness (KH).

Recommended dose:

100 g/m³

Packaging sizes: 10 / 50 / 25 / 500 kg.

SchlixX®

For the healthy maintenance of your ponds, decomposition of sludge and avoiding silt build-up.

Sludge forms in every pond over a period of time, for example due to leaves, dead microorganisms, food residue and fish excrement. These decay processes always limit the dissolved oxygen in the water.

Söll **SchlixX®** frees your production pond from sludge and sediment. This saves you the effort and cost of excavating the pond.

By binding phosphate, the algae's main nutrient, Söll **SchlixX®** prevents algae and thus enables a long-term and lasting reduction of algae in ponds.

Recommended dose:

50 g/m³

Packaging sizes: 10 / 50 / 25 / 500 kg

SchlixX® plus

SchlixX® plus contains highly-active microorganisms, making it twice as effective.

When added to the water, these microbes start decomposing organic sludge, dead algae and vegetation, leaves, and fish waste. **SchlixX® plus** prevents those decomposition processes that taint fish flesh.

If the sludge is approximately 80 cm, we recommend SchlixX® plus.

Recommended dose:

50 g/m³

Packaging sizes: 10 / 50 / 25 / 500 kg
